

Customer Segmentation & CRM Intelligence Platform

Exploratory Data Analysis · CMO Read-Out

■ Bottom Line — Four Things to Know

- **1. Revenue is dangerously concentrated.** Top 20% of customers drive **75% of revenue**; Gini = **0.72**. A churn event in the top 1% (which contributes **32%**) is a multi-£10k revenue hit. → *A VIP-tier program is non-optional.*
- **2. International isn't a smaller UK — it's a different business.** UK = **82%** revenue, mean AOV £438. International = 18% revenue, mean AOV **£850 (1.9×)**. → *Two playbooks required.*
- **3. A B2B segment is hiding in a B2C dataset.** Top 50 customers average **41 orders each**, drive **33% of revenue**, and buy 10am–3pm Tue–Thu. → *Named account managers, not email blasts.*
- **4. Q4 is the revenue engine — but gift-season retention is untested.** Peak month **2011-11** = £1,156,206. → *Dedicated 30/60/90-day post-Christmas nurture before the January slump.*

■ The Numbers

Metric	Value
Customers	4,338
Invoices	18,532
Revenue	£8,887,209
Top 1% revenue share	31.8%
Top 20% revenue share	74.7%
Gini coefficient	0.72
UK revenue share	82.0%
Intl mean AOV vs UK	£850 vs £438
One-time buyers	1,493 (34.4%)
Top 50 customers revenue share	33.3%
#1 customer revenue	£280,206

■ Hypothesis Verdicts

#	Hypothesis	Verdict	Key Evidence
H1	Top 20% drive ≥70% of revenue	■ CONFIRMED	Top 20% = 75%; Gini = 0.72
H2	International AOV > UK AOV	■ CONFIRMED	£850 vs £438 (1.9×)
H4	B2B hiding in B2C dataset	■ CONFIRMED	Top 50 = 33% rev, 41 orders avg
H6	Gift-season cohort behaves differently	■ DIRECTIONAL	Q4 spike confirmed; retention deferred to P5
H3	2nd purchase < 30d → 3× LTV	■ PENDING	Phase 4 will validate
H5	Dormant-but-loyal recoverable	■ PENDING	Phase 5 will validate
H7	Returns concentrated in few customers	■ PENDING	Phase 5 / future work

■ Three Marketing Recommendations (actionable now)

#	Recommendation	Driven by	Expected impact
1	Launch 4-tier VIP program (top 1% / 5% / 20% / rest)	H1	Defends 75% of revenue base
2	Split UK and Intl into separate CRM tracks	H2	Unlocks Intl AOV ceiling without diluting UK ROI
3	Build B2B account-management lane for top 50 accounts	H4	Protects the 33% revenue concentration

■ Chart Appendix

Seven hero charts supporting the findings above. Each chart was built to be re-used directly in the Phase 6 segmentation deck and the Phase 9 final portfolio presentation.

Business read: This justifies a VIP-tier program. Defending the top quintile is more valuable than chasing the bottom half. (Hypothesis H1 — CONFIRMED)

Chart 1 — Revenue concentration (Lorenz curve). Top 20% of customers → 75% of revenue.

Chart 2 — Monthly revenue & order volume. Q4 spike confirms gift-season as the engine.

International orders are 1.9× higher in mean AOV — fewer but more valuable

Chart 3 — UK vs International: revenue share and AOV. International AOV is 1.9× UK.

34% of customers are one-time buyers — repeat-purchase is the #1 lever

Business read: 1,493 one-time buyers + 1,973 light buyers = 80% of base, but they are NOT the revenue engine. A 2nd-purchase nurture program could shift hundreds of customers to mid-tier. (Phase 4 will quantify.)

Chart 4 — Customer frequency distribution. 34% of customers buy only once.

Tuesday-Thursday lunchtime is peak — B2B buying pattern

Business read: Revenue concentrates 10am-3pm on weekdays, peaks Tue-Thu. Saturday is nearly absent. This is a working-hours purchase pattern — strong B2B signal. Email-send windows should be mid-week, mid-morning. (Supports Hypothesis H4.)

Chart 5 — Day-of-week × hour revenue heatmap. Work-hours buying pattern = B2B signal.

UK dwarfs every other market by ~25× — Netherlands is the surprise #2

Business read: Despite trailing UK by an order of magnitude, the Netherlands punches above its weight on revenue per customer. International expansion strategy should start there, not in the highest-volume regions. (Geographic insight beyond Hypothesis H2.)

Chart 6 — Top 10 countries by revenue. UK dwarfs every other market by ~25×.

Hidden B2B inside a B2C dataset — top 50 customers = 33% of revenue

Business read: Top 50 customers average 41 orders each (vs. 2 for the median customer) and drive 33% of revenue. These behave like B2B accounts and need account-managed CRM, not bulk marketing. (Hypothesis H4 — CONFIRMED)

Chart 7 — Top 50 customers (orders × revenue). Hidden B2B accounts contribute 33% of revenue.

Portfolio Translation (queued for Phase 8)

Resume bullet candidate: Conducted EDA on a 392K-row e-commerce dataset to validate four CRM-strategy hypotheses; quantified that the top 20% of customers drive 75% of revenue (Gini 0.72), international AOV is 1.9× UK, and 50 'B2B-like' accounts contribute 33% of revenue — directly informing the customer segmentation strategy in subsequent phases.

Interview talking point: My EDA doesn't end with 'here's an interesting chart' — it ends with 'here is the marketing action we should take, and here's the £ value at stake.' That's what makes analytics

useful to a CMO.
