

[YOUR NAME]

Data Analyst · Future Data Scientist · Customer Analytics · CRM Intelligence · Agentic AI

[email] · [phone] · [LinkedIn] · [GitHub] · [Location]

PROFILE

Data analyst translating raw transaction data into CRM and marketing decisions. Built an end-to-end customer-intelligence platform (RFM segmentation · ML personas · Agentic AI advisor) on a 4,338-customer UK retail dataset; quantified an £1.06M recoverable revenue pool and identified a hidden B2B segment driving 60% of revenue. Bias toward business framing and decision velocity, not notebooks for their own sake.

FEATURED PROJECT

Customer Segmentation & CRM Intelligence Platform

End-to-end CRM analytics + Agentic AI · UCI Online Retail (541K transactions · 4,338 customers · £8.89M)

- **Framed and scoped** an end-to-end CRM engagement on a 541K-row UK retail dataset; defined 6 stakeholder personas, 12 KPIs across 3 layers, and 7 testable hypotheses — re-framing the request from "customer acquisition" to "customer intelligence" after Lorenz-curve analysis showed top 20% of customers drove 75% of revenue (Gini 0.72).
- **Quantified** that fast 2nd-purchasers (≤30 days) have **11.9× the CLV** of one-time buyers (£4,892 vs £411 · predicted 3×, observed 11.9×) — justifying a 30-day post-purchase nurture program with ~£448k incremental annual revenue per 100 converted customers.
- **Implemented** a 9-segment RFM-based CRM segmentation system on 4,338 customers and translated each segment into a marketing playbook with named action, channel, budget priority, and KPI; surfaced a **£1.06M recoverable revenue pool** (1,170 customers in At-Risk + Cannot Lose Them tiers).
- **Built** an ML-driven 5-persona segmentation (K-means · K=5 chosen via elbow + silhouette + business interpretability · PCA 83.9%); identified a **hidden B2B segment of 689 customers** (16% of base) driving 60% of revenue — 13× larger than a manual top-50 cutoff would have caught.
- **Designed and prototyped** an **Agentic AI Marketing Insights system** with 4 deterministic data-grounded tools and an LLM rendering layer ('the LLM renders, the tools decide'); eliminated numerical hallucination as a failure mode by construction; system is one-function-swap away from live LLM deployment.
- **Delivered** 6 reproducible notebooks, 2 executive PPTX decks (segmentation + AI architecture), a system-design DOCX, 7 markdown reports, a 2-page executive PDF, and 22 business-captioned hero charts — every visual paired with a one-line CRM-action interpretation.

CORE SKILLS

Data & Analytics	SQL · Python (pandas, NumPy) · EDA · Hypothesis Validation · Data Quality Frameworks
Customer Analytics	RFM Scoring · CLV · Cohort Retention · Customer Segmentation · CRM Playbooks
Machine Learning	K-Means · PCA · Silhouette/Elbow Selection · Feature Engineering · Model Interpretability
Agentic AI / LLMs	Agent System Design · LLM Prompt Engineering · Hallucination Guardrails · Tool-Calling Architecture
Visualization & Communication	matplotlib · PPTX/DOCX/PDF Reporting · Executive Decks · Business-Caption Storytelling
Languages	English (professional) · Korean (native/professional — adjust as applicable)

SELECTED OUTCOMES

11.9× Fast 2nd-buyer CLV multiplier (vs predicted 3×)	£1.06M Recoverable revenue pool quantified	689 VIP B2B accounts surfaced by ML (60% of revenue)	0.72 Gini coefficient · top 20% = 75% revenue	22 Business-captioned hero charts
--	---	---	--	--

EDUCATION

[Degree, Institution] · [Year] · [Honors / GPA if relevant]

Relevant coursework: [Statistics · Machine Learning · Data Mining · Database Systems]

EXPERIENCE / ADDITIONAL PROJECTS

[Most recent role / project] — [Company / context] · [Dates]

- [Bullet 1: quantified outcome] · [Bullet 2: tool/skill demonstrated]
- [Bullet 3: business impact]

Full portfolio & reproducible notebooks: [GitHub URL] · Executive segmentation deck and AI architecture deck available on request.
